

DuraStreams-Mission Critical Servers

Why make your Data Wait? Have 24/7 Access with Zero Downtime

At a time when the digitization of data is ever so critical for business applications, Premio continues to deliver innovative storage solutions that solve the many industry challenges for managing and delivering data effortlessly. Especially in mission critical environments where downtime can be costly or even devastating for many businesses – a durable yet highly redundant server is required for many data-intensive applications.

The Premio DuraStreams family line of servers is meticulously built to be some of the most stable and easiest to service rackmount servers available on the market today. Designed to eliminate your downtime to zero, each unit features hot-swappable bays for 24/7 runtime, ensuring critical redundancy and continuous performance delivery when it matters most! Especially when it comes down to upgrading next-gen components, IT technicians are able to easily hotswap DuraStreams' motherboard nodes quickly and efficiently, leaving absolutely no room for downtime. In addition to its fault tolerant redundant design, the DuraStreams servers also feature a patented tool-less drive tray design that makes service and maintenance effortless. If storage drives (SSD /HDD) in our DuraStreams servers ever require service or need replacing, our tool-less design provides both the speed and efficiency to keep your business running smoothly all year round.

KEY APPLICATIONS:

KEY PREMIO BENEFITS:

REDUNDANCY

DuraStreams is the perfect choice for mission critical applications because of its redundant hot-swappable functions for a majority of the components. A key benefit is the feature that allows components to be hot-swappable while the system is still running – eliminating the chances for costly downtime. The system is also equipped with an internal PCIe3 x8 NTB link for applications that requires fast and low latency redundancy while also using 1Gbit Ethernet for heartbeat.

12Gb/s SAS3 TECHNOLOGY

DuraStreams is designed with the latest generation of SAS technology and achieves 12Gb/s for each port. It also supports end-to-end 12Gb/s storage devices such as HDD/SSD through 12G SAS expanders, 12G SAS HBAs, and RAID controllers. DuraStreams can also support 36 physical 12G SAS expanders by providing dual ported SAS to enable redundancy for shared-storage devices.

FUTURE-PROOF UPGRADES

As technology continues to evolve at a rapid rate, it is important to plan for the possibility to upgrade and scale. DuraStreams provides great design architecture because of its ease and functionality for next gen upgrades. For example, the motherboard nodes can be easily swapped for the newest platform, thus cutting any lengthy lead times in the development cycle.

PATENTED TOOL-LESS DESIGN

DuraStreams provides a tool-less design that allows for superior ease of maintenance and serviceability on faulty drives. This innovative feature allows system integrator technicians, IT administrators, and Service Technicians the ability to save on integration/ service times, which ultimately helps with lowering the overall total cost of ownership (TCO).

HIGH EFFICIENCY POWER SUPPLIES

In order to help achieve efficient power management, DuraStreams servers are designed with 92% power-efficient redundant power supplies. All the models in the DuraStreams family are also certified with 80 Plus Platinum Power Supplies with an additional feature such as PMBUS 1.2 for better management monitoring and control.

INTEL® EMPOWERING TRANSFORMATION IN A DIGITAL WORLD

As IT / enterprise infrastructures expand and begin virtualizing their data into the cloud, data centers are faced with the challenges of managing complex customer workloads and being hyper-efficient with every IT dollar spent. Especially for many data-intensive applications today, a key value for data management is the ability to evaluate and architect solutions that deliver both a balance of high performance compute and also scalable memory bandwidth through its I/O's.

Intel competitively situates itself in the needs of existing and emerging data center workloads. The Intel® Xeon® Scalable processor provides the foundation for a powerful data center platform that creates an evolutionary leap in agility and scalability.

Disruptive by design, this innovative processor sets a new level of platform convergence and capabilities across compute, storage, memory, network, and security. Enterprises, cloud, and communications service providers can now drive forward their most ambitious digital initiatives with a feature-rich, highly versatile platform that includes:

- Up to 28 high-performance cores, six memory channels, and 48 lanes of PCIe* 3.0
- Integrated Intel Omni-Path Architecture Host Fabric Interface
- Up to three Intel UPI channels
- Intel Advanced Vector Extensions 512
- Support for Intel® Optane™ SSDs and Intel® 3D NAND SSDs
- Enhanced Intel® Run Sure Technology
